WHY USE ECOWORKS EC

ECOWORKS EC is not a leaf shine neem product and contains a variety of active ingredients rather than a single active ingredient. Many leaf shine products are the byproduct of azadirachtin extraction, which is then used to produce azadirachtin based products. Ecoworks EC has superior performance when compared to azadirachtin products, especially when combating tough to control biting and sucking pests such as aphids, whiteflies, scale, mealy bugs, and diseases like powdery mildew.

HOW TO USE ECOWORKS

ECOWORKS EC can be used at a rate of 2 Tsp (10 mL) per gallon of water for effective control on a wide variety of plants as a foliar application for broad-spectrum disease and pest control. 2-3 treatments required for optimal results.

For severe infestations, spray every 5-7 days.

For preventative purposes, spray every 7-10 days.

For soil drench or recirculating system applications, Ecoworks can be applied once every 7-14 days at a mixing rate of 1/4 -1 mL / gallon of water for controlling soil-borne pests, nematodes, and diseases.

ECOWORKS EC contains a food-grade wetting agent, so the addition of a wetting agent is not necessary when mixing.
