

TERPINATOR

BESTSELLER

TERPINATOR®

- ✓ LIQUID
- ✓ AROMA
- ✓ HYDROPONIC
- ✓ RESIN
- ✓ FLAVOR
- ✓ FLOWERING PHASE

TERPINATOR is the original source for improved flavor, aroma, and potency in oil-producing plants. This specialty nutrient additive is formulated from all-natural and organic inputs and a proprietary blend of plant extracts that provide the building blocks for terpene and trichome production.

AVAILABLE SIZES:

1 QT, 1 GAL, 2.5 GAL, 6 GAL,
15 GAL, 55 GAL

WHY USE TERPINATOR?

TERPINATOR was designed to provide growers with a terpene enhancement solution that could be easily incorporated into any style of growing, resulting in a finished product that would stand out from the competition. Terpinator improves the aroma and flavors specific to your genetics. Users will notice improved trichome size and development in plants, as well as improved concentration of terpenes and resins. Terpinator contains no heavy metals or PGR's, making it an excellent additive to nutrient programs at any scale.

HOW TO USE TERPINATOR

TERPINATOR can be deployed in any growing system and is designed to be used as a root drench for soil, coco, or hydroponic growing

media. Apply 5 - 25 mL/gallon of water alongside other fertilizers, or as frequently as every watering.

FOR DEEP WATER CULTURE SYSTEMS: change reservoir once every 3 - 5 days. Maintain aeration within the reservoir when using Terpinator.

DO NOT USE AS A FOLIAR SPRAY.

PURPINATOR®

- ✓ LIQUID
- ✓ HYDROPONIC
- ✓ FLAVOR
- ✓ AROMA
- ✓ RESIN
- ✓ FLOWERING PHASE

PURPINATOR is a specialty nutrient additive formulated to deliver increased flavonoid, terpenoid, and resin production in your plants. In addition to these benefits, Purpinator will improve the coloration of plants with purple phenotypes. Much like its predecessor, Terpinator, Purpinator activates the metabolic pathways for trichome and terpene production in plants by providing the building blocks for these processes.

AVAILABLE SIZES:

1 QT, 1 GAL, 2.5 GAL, 6 GAL,
15 GAL, 55 GAL

WHY USE PURPINATOR

Alongside terpene and resin improvements, Purpinator will improve the coloration of plants with purple phenotypes by enhancing the plant's ability to produce color-influencing compounds without the need for cold treatments or delayed harvests.

HOW TO USE PURPINATOR

Purpinator can be deployed in any growing system and is designed to be used as a root drench for soil, coco, or hydroponic growing media. Apply according to below feeding program for best results.

FOR DEEP WATER CULTURE SYSTEMS: change reservoir once every 3 - 5 days. Maintain aeration within the reservoir when using Purpinator.

DO NOT USE AS A FOLIAR SPRAY.
